

## **Delta Displays Introduces Revolutionary WX Series Displays**

Providing seamless, high resolution and shadow-free displays in space constrained environments

**Issued by: Delta Products Corporation**

**Issued on: 3/13/2012**

Portland, Oregon - March 13, 2012 - Delta Products Corp today announced the introduction of the WX series video wall displays, a complete lineup of high resolution front projection video walls that provide pristine high resolution images, easy assembly and minimal maintenance. Available in a variety of preconfigured large format sizes, the WX series provides a unique solution for multiple visualization applications.

At the heart of the WX series is the latest in Ultra Short Throw front projection and edge blending technologies. Marrying these two technologies, the WX series eliminates cable clutter and shadow interference and provides a truly seamless video wall in a multitude of environments, from conference rooms to control rooms and everything in between.

A complete solution, the WX series video walls can be assembled in under an hour, with free-standing options available in two projector high configurations and wall-supported options for one projector high configurations. Once installed, the WX can display ultra-high resolution content on a seamless canvas, whether the display is used to show a single detailed mapping image, or multiple video conferencing windows.

*“Delta’s new WX Series is exactly what the commercial A/V channel has needed for years ... large, super-resolution displays that fit into small areas where front projection simply isn’t practical,”* stated Tod Gooch, National Sales Manager. *“With multiple sizes providing seamless display resolutions up to 5 megapixels, Delta’s WX offers a new and exclusive ‘best fit’ for the most challenging Wide Extreme display projects.”*

The WX series video wall displays can also be paired with Delta’s innovative Distributive Vision Control System (DVCS). A highly flexible and expandable video wall control solution, the DVCS provides users with full control of multiple video windows simultaneously, allowing for the WX series to be an ideal candidate for command and control applications.

## AVAILABILITY

The WX Series comes in four configurations. The WX21 provides two edge-blended projectors with a total screen viewing area of 139". The WX31 provides three edge-blended projectors with a total screen viewing area of 202". Both the WX21 and WX31 are configured for wall-supported mounting. The WX22 provides a total viewing area of 146" with four edge-blended projectors in a two-wide by two-high array. The WX32 provides six edge-blended projectors in a three-wide by two-high array with a total viewing area of 183". The WX22 and WX32 are both configured for free standing applications.
